# ⭐ Alpha Examples for Bronze Users 🥉

Table of Contents

1. Social Media Effect
2. Valuation Disconnect Swing Short
3. Network Dependence

## Social Media Effect

### Hypothesis

Poorly performing stocks are discussed more in general on social media platforms and thus they might have a higher relative sentiment volume, thus consider to short those stocks.

### Implementation

You apply negative weights if there's more sentiment volume, which we can do through social media data fields.

```
-scl12_buzz
```

| Region | Universe | Language | Decay | Delay | Truncation | Neutralization | Pasteurization | NaN Handling | Unit Handling |
|---|---|---|---|---|---|---|---|---|---|
| USA | TOP3000 | Fast Expression | 0 | 1 | 0.01 | Industry | On | Off | Verify |

## Valuation Disconnect Swing Short

### Hypothesis

Value and Momentum in stocks is typically uncorrelated and a stock with high momentum and value score correlation suggests a disconnect between the stock's price and its intrinsic value - thus we short these stocks.

the past 3 years. Using ts_backfill() operator to backfill unavailable data during previous days.

### Hint to Improve Alpha

Compare the stocks in the same group using group operators and model data.

```
-ts_corr(ts_backfill(fscore_momentum,66),ts_backfill(fscore_value,66),756)
```

## Network Dependence

### Hypothesis

A higher hub score in the data field indicates that a company's customers have many connections, while a lower score suggests a more concentrated set of partners. If a company's customers have lower hub scores, it means they have fewer partners and potentially rely on the company. This can be positive for the stock as it indicates a lower risk of the company being replaced. Therefore, investing in such stocks for the long term may be a good idea

### Implementation

Long stocks of companies whose hub score of customers are low over the past two years using price volume data.

### Hint to Improve Alpha

Can using some cross-sectional operators on top of the expression improve the performance of the idea?

```
-ts_mean(pv13_ustomergraphrank_hub_rank,504)
```
